RESORTS TO BONDS

Issue of \$300,000 Authorized by Daly-Judge.

SALES ARE RESTRICTED

To Come Gut Only as Needs Require It.

Frank Statement of Company Tribulations-Mill at Park City to Be Closed Down at Once.

To enable the company to wipe out its present indebtedness, to prosecute further development and to enable it to place its properties among the dividend-payers of the great camp in which they are located, the directors of the Daly-Judge of Park City, at a meeting in this city during the afternoon, authorized the issuance of bonds aggregating \$300,000, these securities to run for a period of two years beginning January 1, 1904, and to bear an interest of 7 per cent per annum. In submitting its conclusions, President John J. Daly issued a statement on behalf of the board, which says:

'It has been generally understood among the shareholders that such action was contemplated, and among a majority known to be absolutely necessary in order that the mine might be brought to such stage of development as to make it a dividend-payer. Before sanctioning the issue a number of the heaviest shareholders and men of ample means were asked, and they readily consented, to take up as many of these bonds as necessary—even to the extent of the entire issue—without calling upon the smaller stockholders. While the issue is thus guaranteed by a few, it is not the purpose or desire of the directors to debar any stock-holder in the company from subscribing to them if he cares to. In fact, the management will be pleased to have them all contribute according to their holdings, but the guarantee of the heavier interests is such that participation on the part of the minority is entirely ontional. entirely optional.

entirely optional.

"Interest on the bonds will be paid quarterly, and, under the stipulations therein contained, they may be called in for redemption at the expiration of any interest-bearing period. They will be issued in denominations of \$1000, and may be subscribed for and issued. end may be subscribed for and issued at any time, so long as their sale is found necessary. It is the purpose of the company to issue these bonds only as funds are needed, and it is not thought that it will ever be necessary to sell the entire amount authorized, while it is hoped that a comparatively small proportion of the total will be found ample for all requirements.

"The management will at once be-gin the exploration and development of that portion of the company's holdings in which it is convinced that the best and richest ore bodies will be found. The length of time and money necessary to carry out these plans cannot be stated with any degree of certainty, but substantial results are looked for by or before the close of the present

As a matter of sound business polley the mill will be practically closed down at once. There is exposed in the mine at the present time a large ton-rage of ore (estimated by Manager Dunyon at 150,000 tons), carrying sufficient values in silver, lead and lead zinc that, if they could be separated and saved, with its present output, would make the property a good dividend-earning proposition; but as a certain percentage of loss occurs in the tailings which the management is convinced can be recovered, and as another loss occurs through the values in silver and lead that now go into the zinc middlings, it seems too much like dissipating the company's resources to allow it to continue. Mill Superintendent Sherman, who has made great improvements since assuming charge of the mill, and who is still doing good work for the company, will continue to make tests to determine the best methods of correcting these leakages, and so far advanced are these experiments that it can be stated as almost vinced can be recovered, and as anments that it can be stated as almost a certainty that the problem will, be-fore many months, be solved. The closing down of the mill, therefore chould be viewed by the stockholders as a matter of economy, entirely, and not in the light of a confession on the part of the management that the plant annot be made to pay, for such is not the case. Gauged by the work done at similar plants on other properties, the mill is doing first rate as it is, earning a small sum monthly but it is being done at the sacrifice of what amounts to a very large sum in the course of a month and year, and it is to correct this drainage and waste and convert it into money for the shareholders that the decision has been reached to keep the ore in the mine temporarily, or until such time as the highest percentage of its value can be recovered. It should not take many months to settle this problem, and then the mill will again be operated at capacity. The losses row being made will many times over pay the interest on the bonds to be issued, so the shareholder will reap

the benefit of the policy being pur-It is said that only those employed on the mill will be deprived of em-ployment and that but temporarily.

JOE BOWERS STRIKE.

Ore of Good Quality Found on South -High Grade in Upraise.

A telephone message from the camp management of the Joe Bowers of Tintic brought assurance to the local offices during the day that in the south drift of the 400-foot level had just been exposed eighteen inches of good ore,

the surface for shipment, a lot of it to come the present month.

THE WEEK ON 'CHANGE.

Business Reduced to Levels It Was Painful to Consider.

The output of the week on the mining exchange was reduced to 114,335 shares of stock, that brought but \$30,442.87 an exhibit more humiliating, perhaps, than any that has appeared on the bulletin since the struggles of early days, and since the struggles of early days, and in almost grotesque contrast with that afforded at the mines and smelters, at which former records are going down hourly, while to date the new year has been characterized by most liberal distributions by the breadmokers. Of sprinting the record was almost entirely destitute. On the contrary the shares that was reconstitled to remain shares that were permitted to remain undisturbed were the shares that con-gratulated themselves. Con Mercur, of whose latest developments in Golden Gate ground the talent was advised a week ago, moved up only creepingly, while Contury slid down several points and was shorted around the close at 50 was shorted around the close at the cents—delivery thirty days later. Daily West was a sufferer without cause for it, as was Daily, which had settled for the first lot of ore from the Muzeppa shaft during the week. It was the unrelenting tale of wee that kept Daily-Judge hanging from the parachute and Judge hanging from the parachute and an inherent dread of "bonded indebted-ness" which closed it on a transfer at \$3.09, while there is no doubt that an impression that Grand Central was to pass its dividend weighed it down to the figures at which it changed hands on Friday. Star Con. recorded some gains, but not such as were expected on re-ports concerning the importance of the latest development, while Sacramento "broke even," as did Uncle Sam and Yankee Con. Lower Mammoth did not respond to the increased output under the market for its second-class ores, nor did New York, whose physical condition did New York, whose physical condition is reported to have steadily improved with recent developments. The day on change closed on a slightly im-

THE ELECTRIC GROUP.

High-Grade Copper Ores From the Deep Creek Proposition.

Edward Shunk, who has been prosecuting assessment work for the year on exposed eighteen inches of good ore, while running along with it was a sixinch streak of second-closs. The work which has resuited in this disclosure has been in the direction of the old workings and there is a theory, of course, that the ore-bearing channel which was productive of so much above is about to be recovered below. In the upraise above the same level the management reports sixteen inches of high-grade ore that is now being raised to the properties of the Electric Mining

shows 14 per cent lead, 43.7 ounces all-ver and 33.10 gold per ton. Samples of ore from the Electric tunnel show from 15 to 44 per cent copper, \$6.20 gold and \$2.30 in silver per ton. The company is doing a great deal to stimulate interest in the region.

GOLD MOUNTAIN DISTRICT.

Tapping of Three Ledges at Great Depth-At the Trapper's Pride.

[TRIBUNE SPECIAL] Richfield, Jan. 16 .- A 1000-foot tunnel to tap three ledges at a depth of 800 feet from the surface in the last one to be cut, is monopolizing the attention of the Signal Peak management at its promising group of twelve claims in Gold Mountain district. The dig-gings are located on the Fish Creek slope of the mountains, just west of the Annie Laurie Extention. By 350 feet of tunneling and surface prospect-ing there was well established at the Signal Peak the presence of three parallel veins of gold and silver-bearing ore within a distance of 400 feet. The first vein, so far as exploited, is from four to ten feet wide, the second six feet, and the third, or as the owners call it, the back vein, from seven to the second four the feet, and feet, although the feet at the second six feet, and feet at the feet to the second six feet at the feet to the second six feet at the feet to the feet to the feet at the feet to the second six feet at the feet to the feet at the feet to the feet at the feet to the feet at the feet a twelve feet. A 240-foot tunnel following these ledges and cross-cutting them exposes assay values running from \$2.80 to \$180 gold, and from two ounces to 132 ounces silver. These values and this 350 feet of workings, bowever, are comparatively on ton however, are comparatively on top Going far down the steep mountain, they have started the 1000-foot tunnel, which has now reached a length of thirty-five feet. It is expected through this working to tap the first of these three parallel zones at 600 feet from the tunnel's eye and at a vertical depth of 400 feet. Another 200 feet should reach the middle ledge at 550 feet from the surface and 200 feet farther in the back yein, and the largest of the three should be pierced at a vertical depth of 800 feet. Two shifts are steadily em-ployed for the winter, and will not quit until this destination is reached. They are making about five feet a day.

At the Trapper's Pride Manager A McLain has run into some fine orechutes in the sixteen-foot ledge at a distance of 1500 feet from the mouth of the tunnel. Three shifts are em-ployed in blocking out ore. This proprty is a close neighbor of the Signal

Work is progressing continuously or the Annie Laurie Extension and the Bluebird Extension, just south of the Annie Laurie

Ogden with a force of miners to re-sume work at the Keystone, joining the Trapper's Pride on the northwest.

The Sevier is working three shifts and will very soon add three more.

Barlowe Metcalf is in charge of the A sign which, in Mr. Nelson's opinion, augurs well for the Gold Mountain camp is the very little jumping of claims on the last of the year. He attributes this to the fact that assessment work was very generally done in

READY TO START.

Ohio Company Mill Now Walting on Outlet for Bingham Ores Is Restored Ores From Mines.

The announcement was made during the day that the Ohio Copper company's mill at Bingham is cocked and primed and ready to begin the active concentration of second-class ore as soon as the railway begins the loading of its bins that have a capacity of about 500 tons. The ore, it is said, will maintain an average better than the usual that goes to mill in camp and the product should be made to yield a fine margin. At all events, that from the small Rogers mill has been made to do so, while new tables will render the new plant more affected. plant more efficient.

ORES AND BULLION.

Week's Settlements in Open Market-Output of Copper Bullion.

In the ore and bullion market during the week the settlements aggregated \$396,400, compared with \$540,900 for the previous one, the shrinkage due entirely to the absence of the gold producers with the monthly clean-up. To over-come this, however, was the increased amount of copper buillion containing gold and silver, from the independent furnaces in the valley and of which consignments to Eastern refineries were made as follows:

Total, pounds While the actual value of the weekly consignments from the copper furnaces

not revealed it is known to exceed \$200,000 at this time.

The day's settlements in the open market amounted to \$76,860, McCornick & Co. reporting them as they follow: American bullion, 349,500; gold bullion, \$1000; gold, silver, lead and copper ores,

In the metal market sliver ruled at 59 cents an ounce, lead at \$3.50 per hun-dred pounds and casting copper at 11% cents a pound.

The Copper Market.

The Copper Market.

The market for copper continues to strengthen with an active export demand, consumers on the continent, especially in Germany, continuing to purchase liberally at current prices, says the Journal of Commerce of New York. In fact, the market is stronger under such buying at 16c advance, the electrolytic copper selling delivered in Europe at 12%c, equivalent to 12%c New York. During the first week of January 5000 tons of copper were exported and it is estimated that between 18,000 and 20,000 tons additional will be shipped during the current month.

THE TRIBUNE NEWS STANDS PLANNING BIG PLANT

Steady Grind on the Cactus Concentrator.

IDEA OF ITS MAGNITUDE

Twe Units Alone Require Forty-Eight Tables.

Space Reserved for Others, Whole a Stupendous Structure-The Enineer's Labors.

Of the magnitude upon which Samuel Newhouse is proceeding in the equipment of his Cactus group of mines, out of Frisco, the plants for the first two sections of the concentrator, now approaching completion, afford a most impressive idea. In addition to other simple yet powerful devices with which to achieve the most economic results, the plans provide for twenty-four tables in each section, or a battery of forty-eight for the two sections, now nearly ready for Manager Bettles, while to these stupendous units, each having a capacity of 300 tons daily, will be added others of similar capacity until the requirements of the apparently exhaustless mass of copper, gold and sliver-bearing rock are provided for. What maximum will be ultimately reached, indeed, the master miner to whom the State is indebted for the latest leviathan in the field of cop-per, had not himself decided on when per, had not himself decided on when he departed for London to be present at the annual meeting of Boston Con-shareholders. However, there is hardly a doubt that it will be built up to a capacity of 1300 tons daily before the expiration of two years if that is no achieved at an earlier day. It is said that Mr. Newhouse will sail from Lon-don for his home in this State the last of the month, and that in New York are official advices on the railway exten-sion awaiting him.

IN THIRTY DAYS.

Copper Company's Last Load of Material Nearing Camp.

The consignment of corrugated from vithin which the powerful mechanism of the Utah Copper company's mill in Bingham canyon is to be inclosed will be delivered at camp today, said Manager Jackling yesterday, this the last lot of material to be employed in its construction. With practically all the machinery in position, the management feels now that the plant will be ready to go into active commission within the next thirty days or around February 15th. Very much pleased with the result of his observations at the plant and underground, President C. M. MacNelli left for the plants of the United States Reduction and Refining company, all of which are in operation, in Colorado yes-terday. He reports the tonnage at these again on its way to the maximum.

Of new developments, consisting of about 500 feet at the mines in Bingham, Manager Jackling says they have been with the most satisfactory results, while the average contents of the rock exceeds his expectations. He will leave for his expectations. He will leave for Colorado early the present week, to re-turn before the close of the month.

WILL REOPEN TODAY.

-New Locomotive There.

The wreck on the Copper Belt railway at Bingham was entirely cleaned up last night, said William Bayly, and the active moving of the ores will be resumed this morning. It is said that within the bins of the various consignors, the output of which has been fied up since the misfortune on Sunday last, there has accumulated about 3000 tons of ore, that will be moved as rapidly as possible, while to expedite this locomotive No. 2, which reached camp last night, will be put into active service to-day. With this additional equipment the local management recognizes that the rapidly increasing volume of ore will require more before the end of the year and on the arrival of President Bayly, which is scheduled for January 25th, further needs will be fully gone into. The energetic manner in which the tracks have been cleared, however, demonstrates that in its present staff the company has the energy and ex-

perience if it is provided with adequate rolling stock.

Week at Bingham.

The Bulletin, in its review of the week at Bingham, says: After a number of days spent in facing up, the Butler-Liberal long tunnel is now well under-ground and in solid formation. It will be run 1200 feet to the Butler vein and or route intersect two veins that have as yet been little prospected. A spur will also be run through Snowbird ground to the Leona vein, one of the most valuable in the group, and opened at surface in Dixon gulch. The big bore starts in Fourth of March group, a few feet from the Erick side line. It t few feet from the Erie's side line is the most important enterprise yet be-gun in Markham gulch, and besides af-

fording needed drainage should open up "all kinds of ore." The Dalton & Lark main incline is down 1080 feet where it has a fine showing of ore. A small vein of water was tapped this week.

REVENUE'S BIG STRIKE.

Ten Feet of Good Ore Opened Up in the Southern Property.

The Pine Grove district is now comng to the front and developments of importance are reported from that section. uperintendent Schepers of the Revenue nine passed through Milford Wednesday night on his way to Salt Lake with samples from a new ore body that has just been encountered. It is fine-looking rock and the samples indicate that it will run high in silver and gold, but no assays have been made. Mr. Schepers states that the ore was encountered in a new shaft at a depth of eighty feet, in a lime-por-phyry contact, and that the ore body is fully ten feet wide, says Charlie Harte, in the Milford Times.

The Revenue company has been quietly developing this property for a number of years, making no hurrah, but pursuing its course in a systematic and practical way. It deserves all of the good things that it may find.

Good reports also come from the ways. ples from a new ore body that has just

may find.

Good reports also come from the property owned by Messra McAulay and Martin in the same district. Mr. McAulay has received samples of ore that certainly look good. There are two and a half feet that will average seventy-five ounces silver, with bunches running as high at 250 ounces. The owners will probably incorporate in the near future.

The Blue Bell Shaft.

The Blue Bell Shaft.

The first round of shots in the new shaft at the Eagle & Blue Bell was fired Friday list. Men are now working from four levels, two shifts, raising and sinking, and as soon as connections can be made from the old incline the force will be increased, says the Tintio Miner. In this way good progress can be made, and the management hopes to have the shaft down 700 feet by July 1st. The big hole is going down 1300 feet from the mouth of the tunnel, in near the apex of the mountain, 500 feet below the surface. As soon as the shaft reaches the bottom of the old workings stoping will commence.

Mining Notes.

Harry B. Cole left for Tintic last night o inspect his interests. The annual meeting of the Venus Min-ing company will take place on February

Reports from Bingham indicate most encouraging conditions at the Silver Shield. The annual meeting of Martha Wash-ngton shareholders is scheduled for to-

Secretary E. H. Mead of the Carisa left for its Tintic mines last night to study Another lot of copper ore was marketed

by the management of the Columbus Con. during the day; President Caltrow of the Ohlo Copper ompany left for the mines at Bingham esterday morning.

Frank Morehouse has returned from Alta, where he went to make examination of mining properties.

Ed F. Freudenthal, the portly manager of the Manhattan of Ploche, Nev., is at the local offices again. Only 509 shares of Nalldriver were allowed to go for the assessment at yesterday's delinquent sale.

Alviras Snow was among the passengers for Tintic last night, with the Martha Washington his destination

Manager MacVichle of the Bingham on leaves for Bingham this morning to neasure up new developments.

Manager Walter Orem of the Utah-Apex reports the recent strike in that Bingham property opened up into four feet of good ore. No word was received at the local of-fices of the United States company dur-ing the day of the arrival of Managing Director Holden.

Arthur Murphy, who is reclaiming the Daisy of West Dip, out of Mercur, reports the ores running from \$3.50 to \$5 per ton, with eighty tons going daily through the mill.

mill.

MUST GO TO JAIL.

Kansas Girl to Pay Penalty for Wrecking Saloons.

Topeka, Kan., Jan. 16.-The Supreme ourt today issued the mandate committing Blanche Boies to jail for thirty days and to pay a fine of \$100. This is the affirmation of the District court sentence wherein Miss Boles was sentenced for smashing saloon fixtures and win-dows. The Sheriff is out this afternoon looking for the wanted person.

Bright's Disease and Diabetes News.

Office German Democrat,

San Francisco, Jan. 11, 1904. To the Editors of Salt Lake:

Dear Sirs:-For many years an editor myself, I address you by request and as a simple duty. A great discovery has been made in this city. It is fraught with so much importance and yet is so hard to believe, that those who are personally cognizant should add the weight

of their influence, be it great or small. I not only know by contact with many of the beneficiaries but was myself rescued from Bright's Disease by it. The cure has been found, and the difficulty in believing it is costing many lives. It is astounding how far our prejudices carry us. But the great fact is here, and acceptance means recovery.

After my own unexpected release I wouldn't let my friends rest and several took the treatment and recovered. One was Charles F. Wacker, the Sixth street merchant. He had Diabetes and thought he was going to die. He got well and passed for a \$5000 policy.

I say to you as a brother editor that hose of your friends who have Disbetes or Bright's Disease, and every one knows of some, that they can recover I will be glad as one of many survivors out here to give you further information.

CHAS. H. ENGELKE.

We sent for the Fulton Compounds to which the above refers and now have them in stock. They are the first cures the world has ever seen for chronic Bright's Disease and Diabetes. We are sole agents. Free pamphlet. F. J. HILL DRUG CO.,

The Arithmetic of it is this:

A teaset for \$10, will last, maybe, 2 years; cost per year, \$5. A teaset for \$25 will last, probably, 25 years; cost per year, \$1.

We could sell you either one, but our policy is to furnish reliable goods at reasonable prices.

OIL! OIL!

A limited number of shares of the

Farmington Consolidated Oil & Gas Co.,

Of a par value of a dollar, are offered for sale at ten cents a share. This offer is made with the understanding that it may be recalled without notice and that in case of the failure of the Guffey and Galey development work the investment is worthless.

The directors feel, however, that the offer should prove attractive to any one who anticipates, as they confidently do, a discovery of oil, and who desires to share in the advantages arising from the choicest holdings and a strong organization.

They base their confidence on these facts:

Mr. Galey of Pittsburg, the most experienced oil man in the country, said the Farmington district showed the best oil indications he had ever seen, and Guffey and Galey have backed up this opinion by appropriating thousands of dollars for development work. Mr. Rumbaugh, Superintendent for Guffey and Galey, says he is certain of striking oil

gas, and has backed up his opinion by subscribing for stock in this company.

Subscriptions should be sent and checks made payable to Hugh Satterlee, Trustee, 88 Commercial Block.
